OFFICE ACTION

Opening Comments

1. After a closer review of the Appeal Brief dated 03/28/2005 and after further search related arts, the examiner has found at least another reference, US 5,204,288 to *Marks et al*, which would read on claims 45 and 46. Therefore, following is a new ground of rejections.

Claim Rejections - 35 U.S.C. § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 45 is rejected under 35 U.S.C. 102(b) as being anticipated by *Marks et al*

Marks et al (US 5,204,288) discloses a method of providing a material **20a**, **20b** in a site between metal features **14**, **15** on a wafer **10** [Fig. 9], comprising the steps of:
-performing a deposition of the material on the wafer in a site [col. 9, ln.48];
-etching the material in the same general site used to perform the deposition [col. 9, ln.50], wherein the step of etching further comprises etching generally simultaneously with performing the deposition [col. 10, ln.30].

Claim Rejections - 35 U.S.C. § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office Action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 46 is rejected under 35 U.S.C. 103(a) as being unpatentable over *Marks et al*, as applied to claim 45, in view of *Bredbenner et al* (US 4,919,748).

Marks et al is silent about depositing a polymer on the wafer. Nevertheless, such polymer formation on a semiconductor wafer is known in the semiconductor processing art as evidenced by *Bredbenner et al* disclosing the same method of providing a material **23** in a site between metal features **13** on a wafer **11** [Fig. 3], wherein the material is also a polymer [col. 3, ln.12].

It would have been obvious to one with ordinary skill in the art to modify the process of *Marks et al* by utilizing a polymer material between metal features for the purpose of providing better "protection from etchant species for metal sidewall."

Response to Arguments

6. Applicant's arguments with respect to claims 45 and 46 have been considered but are moot in view of the new ground of rejection above.
